

PitStop 2.0 — Master SRS (Business Side)

Unified document for **Owner**, **Branch Manager**, and **Employees** — roles, permissions, dashboards, workflows, and multi-branch operations.
Complements *PitStop Master SRS (Customer Side)*.

- Car Wash
- Multi-Branch
- Roles & RLS
- Supabase Auth

1. Vision

PitStop lets a **shop owner** run one brand with many branches. The owner keeps full control; each branch has a **branch manager** with a separate login; **employees** are roster records only (no app accounts).

2. Role Hierarchy

Owner (shop brand account)

- └ Creates & manages branches
- └ Creates / links Branch Manager accounts (email + password)
- └ Sees all branches + global reports

Branch Manager (one branch)

- └ Manages daily operations for assigned branch only
- └ Adds / edits employees (info only, no login)
- └ Handles bookings, schedule, services for that branch

Employees

- └ Name, phone, job title, notes – stored in branch_employees (no login)

3. Roles & Database Mapping

Role	Login	Table	shop_id	branch_id
Customer	Yes	public.users	—	—
Owner	Yes	public.users	Required	— (all branches)
Branch Manager	Yes	public.users	Required	Required (one branch)
Employee	No	branch_employees	—	Required

4. Owner Dashboard — What & Why

Section	Owner	Why
Dashboard overview	All branches aggregated	Business health at a glance
Branch tabs / switcher	Yes	Owner manages every location
Create branch	Yes	Scale to new areas
Branch profile & gallery	Per branch	Each location has its own identity
Services CRUD	Per branch	Prices/duration may differ by branch
Weekly hours & vacation	Per branch	Operating rules per site
Offers / coupons	Per branch	Local promotions
Bookings (all statuses)	All branches	Override & audit
Employees list	View all branches	HR oversight
Create Branch Manager	Owner only	Security — only owner invites managers
Link existing email as manager	Owner only	Avoid duplicate sign-ups / rate limits
PDF financial reports	All branches	Accounting & review
Notifications	Shop-wide	New bookings & alerts

5. Branch Manager Dashboard — What & Why

Section	Manager	Why
Dashboard overview	Own branch only	Focus on daily KPIs
Branch switcher	No	Assigned to one branch
Create branch	No	Owner decides expansion
Branch profile & gallery	Own branch	Keep listing up to date
Services CRUD	Own branch	Day-to-day menu updates
Weekly hours & vacation	Own branch	Local schedule control
Offers / coupons	Own branch	Run local campaigns
Bookings	Own branch only	Accept / reject / complete
Add / edit employees	Own branch	Roster for shifts — no login needed

Create Branch Manager	No	Prevents privilege escalation
PDF reports	Own branch	Local performance review
Notifications	Own branch	Action on new requests

6. Employee Records (No Login)

Employees are **not** Supabase Auth users. Branch manager (or owner) adds:

- Full name (required)
- Phone (optional)
- Job title — e.g. washer, cashier (optional)
- Notes — shift, skills (optional)

Stored in `branch_employees` . Used for internal roster — future: assign to bookings / shifts.

7. Owner Creates Branch Manager — Workflow

```
Owner logs in (wash@demo.com) | v Opens Branch → Branch Managers section | +-->
Link existing email (user already registered) | | | v | RPC
assign_branch_manager_by_email | +--> Create new login (email + password + name) |
v assign_branch_manager (role before signUp) | v signUp → restore owner session |
v Branch manager logs in → sees own branch only
```

8. Booking Status Flow (Owner / Manager)

```
pending → confirmed (accept) / cancelled (reject + note) confirmed → in_progress →
done confirmed → no_show cancelled ← customer or owner/manager
```

9. Authentication

- Login screen: Customer tab | Owner tab (shop staff)
- Owner & Branch Manager use same Owner login form
- App reads `public.users.role` after Supabase Auth
- Customers blocked from shop login if they are staff
- Demo owner: **wash@demo.com** / demo123
- Demo manager: **manager.wash@demo.com** / demo123

10. Multi-Branch Data Model

```
shops (brand)
├─ shop_branches (main, maadi, ...)
│   ├─ branch_services
│   └─ branch_employees
```

└─ bookings.branch_id
users (owner → shop_id, manager → shop_id + branch_id)

11. Permissions Matrix (Summary)

Action	Owner	Branch Manager	Employee
Log in to app	Yes	Yes	No
See all branches	Yes	No	No
Manage one branch	Yes	Yes	No
Create branch	Yes	No	No
Create manager account	Yes	No	No
Add employee record	Yes	Yes	No
Handle bookings	All	Own branch	No
Export PDF report	All	Own branch	No

12. Supabase Setup (Business)

1. apply-pitstop-2.0-step1-enums.sql
2. apply-pitstop-2.0-step2-main.sql
3. apply-pitstop-2.0-step3-branch-manager-rpc.sql
4. apply-pitstop-2.0-step4-bookings-rls.sql
5. seed-test-data.sql (optional demo data)

13. Future Enhancements (Business)

- Assign employees to bookings / shifts
- Manager performance dashboard per branch
- Owner approves manager-created offers
- Payroll / commission tracking
- Maintenance & Parts owner panels (separate modules)
- Platform admin role for PitStop operations
